

What our students say about studying Physics

"We do a lot of practical work in Physics, not just the Required Practicals. This helps us understand the theory and practise our Paper 3 (practical skills) work."

"I like to look deeper into topics. Studying electricity at A level has helped me understand it much better than at GCSE."

"I didn't really know what I wanted to study at university. I chose Physics at A level because I enjoyed it at GCSE. Now I'm considering taking Physics at university."

"I enjoy the challenge of solving problems. You get a good feeling when you solve a challenging physics problem, especially when it's taken you a couple of goes. Every time you solve a problem you know you're building up the skills to make the next one easier."

"Physics is a recommended A level on so many university courses. I've decided to apply for Computer Science, and Maths and Physics strengthen my application."

"If you're interested in how the world works, you have to be interested in Physics."
